

WATER-PERMEABLE

## PolyPlay S

DUAL-LAYER MULTIFUNCTIONAL ABILITY WITH A SMOOTH SURFACE

The durable all-round PolyPlay S surface is primarily used for playing fields and facilities for ball sports and leisure activities. Its smooth surface and good ball bouncing response make it the ideal surface for ball sports in schools and a variety of outdoor facilities.

BENEFITS

- Durable multi-function surface
- Optimum ball bouncing response due to its smooth surface
- Low-maintenance and year-round use

WATER-PERMEABLE

## PolyPlay S

MULTIPURPOSE / SCHOOL SPORTS

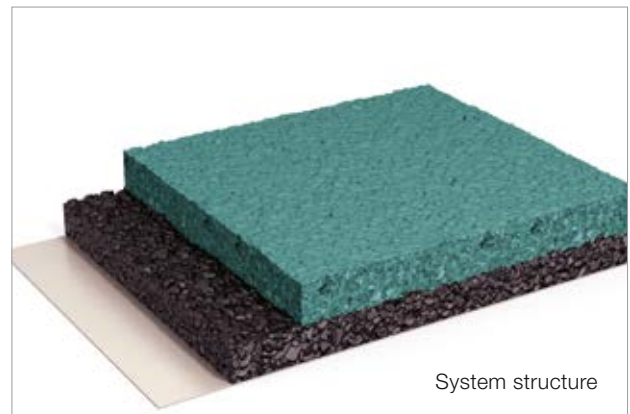

PolyPlay S is water-permeable so that playing fields dry out very quickly, making them suitable for year-round use as all-weather pitches. It can be laid flat but is still slip-resistant. Additional advantages include the high level of wear resistance and low maintenance costs. The PolyPlay S is always laid on a base layer. This ensures constant shock-absorption and deformation properties.

### AREAS OF USE

- Multi-purpose facilities
- School sports facilities
- Jogging trails
- Senior citizens' homes
- Rehab facilities

### PROPERTIES

- Granulated, dual-layer surface
- Coated granules, flat-laid
- Water-permeable
